

Science Picture Symbol Booklets for Grades 1, 2 & 3

Ontario Science Curriculum for:

- Understanding Life Systems
- Understanding Matter and Energy
- Understanding Earth and Space Systems

It is well known that Picture Symbols help autistic children understand the world around them. These Picture Symbols also help the more visual learner, as well as learners who have difficulty using the printed word to learn material.

These information science booklets can also be used as an extra resource to help differentiate learning. They make a concise reference to summarize some of the important concepts in the different science units.

The information science booklets can be left as a reference sheet or cut into small strip booklets. These booklets can also be folded to help with drill and practice, or cut into blocks and used as a card game or a memory/matching game.
