

## Fossil Fuels-- Coal, oil and natural gas Computer Mini Research Project

Today, we get most of our energy from fossil fuels, such as coal, oil and natural gas. These sources of energy are being used much faster than they can be replaced or renewed. This is why they are called **non-renewable**.

Research and find out the following information:

1. How are fossil fuels formed?
2. Where are they found on Earth?
3. How are these three fossil fuels recovered from the ground.
4. How are they used by humans?
5. Advantages and disadvantages of using fossil fuels.
