

## ACTIVITY DEVELOPMENT FOR SBI 4U

Using the site developed by Cold Springs Harbour research centre, I set up a web site for students of SBI 4U (biology) to access a short slide show about Rosalind Franklin. This site provides additional information about Franklin and the competition between scientists researching the structure of DNA. Students will then be asked to research another scientist who played a key role in timeline of the research into the structure of DNA. Students will develop a better understanding of the competing interests which drive scientific research and defined how scientific research differs from other fields of study.

Slides and documents were assembled from the online library at DNA interactive

(<http://www.dnai.org/teacher>) Students are directed to a page <http://www.dnai.org/lesson/go/15767/> to access the slideshow.
