

## Area: Using Strategies

Party Pizza is designing 2 different-shaped pizzas to sell.

1)**Predict:** Do the 2 pizza shapes have the same area?

2)**Compare** the areas of the pizza shapes in 2 ways.  
Each time, record the unit you used and the number of units needed to cover the shape.

### Remember

- When you record an area measurement, you write the number and the type of unit you used (e.g., 4 green triangles or 2 square tiles)
- When you use a grid of squares to measure area, you can write square units.

<b>Unit of Measurement</b>	<b><u>Rectangle shaped Pizza</u></b>	<b><u>Circle shaped Pizza</u></b>
What did you use to measure the pizza?	The area is...	The area is...

Should Party Pizza sell these 2 sizes of pizza for the same price? Explain why or why not.
