

How many different Color Tile shapes can you make that have the same perimeter?

- Work with a partner. Use 3 to 8 Color Tiles to make a shape. Each tile in the shape must touch at least 1 other tile along a complete side.
- Record your shape.
- Find the perimeter of your shape and write it above the recording.
- Now use Color Tiles to make as many different shapes as you can that have the same perimeter. Record each shape and its area.
- Be ready to talk about how you made shapes with the same perimeter and what you learned about their areas.
