

Using ChatterPix to Express Point of View

Students watched the movie The Star. Then they picked one of the animals from the movie and drew a picture. Using the ChatterPix App, students recorded their voice to create a video from the animal's perspective about seeing Baby Jesus for the first time.

Using ChatterPix to Share Information in a Research Project

Students used the Chatterpix app to record information about what their research animal eats. The reader can learn about what the animal eats, how it eats and how it captures its food by listening to the information.
