Core French in Combined classrooms Using STEM

Team Members:
Kelly Thorpe and Brittany Thomas

School District:
North East District School Board

What We Did

We included more STEM resources in our stations so that we can work with kids on one on one or one on small group. We added books, photos and manipulatives to go along with the STEM resources, such as number lines, hundred's chart, 5 and 10 frames, 5, 10 and a Hundred Pop it frames. The stations were based on current units but also open enough for kids to create and build.

What We Learned

We learned that it, indeed, does keep kids engaged. It allows for more of an authentic way to introduce vocabulary or to practice speaking French using basic vocabulary. The Stations are very helpful for promoting French communication in the combined classes, allowing more one on one or one on small group time. It helps kids become excited to speak French. This idea: “Kids remember words easier when they are doing something they love” was something that was reinforced because of these stations.

How We Shared Our Learning With Others

We talked to each other about what was happening and I shared videos and pictures on SeeSaw to parents to see. The kids, themselves, would ask to submit photos and we would practice on video saying French phrases and words.

Any Next Steps We Have To Continue Our Learning

We will make up word lists to include with the stations.

We will include more writing opportunities based off the stations.

A next step would be the opportunity to have release time to work on vocabulary lists and writing tasks and to discuss what else we could accomplish.
